

Setup Instructions (Database + Project)

1. Download the database file

- Download the provided **db.sql** file to your computer.
-

2. Open XAMPP and start services

- Open **XAMPP Control Panel**.
- Start:
 -  **Apache**
 -  **MySQL**

If MySQL crashes:

This usually happens because another MySQL service (like MySQL Workbench) is running.

Fix it like this:

1. Right-click the **Windows Start button** → click **Run**
(or search “Run” in the taskbar)
2. Type:
3. services.msc

then press **Enter**

4. Look for anything named **MySQL / MariaDB**
5. Right-click each one → click **Stop**
6. Go back to XAMPP and try starting **MySQL** again.

 If it still doesn't work, let me know.

3. Open phpMyAdmin

- Go to your browser and open:
 - <http://localhost/phpmyadmin/>
-

4. Import the database

1. Click **New** on the left sidebar.
2. Click the **Import** tab.

3. Click **Choose File** → select **db.sql**.
 4. Scroll down and click **Import**.
-

5. Done

- The database should now be imported and working.
 - Let me know if you get any errors.
-

6. Place the project files

- Create a new folder inside **xampp/htdocs** with any name and place the project there.
- Put the GitHub project folder inside:
 - xampp/htdocs/(new folder)
